

# Carry Case Quality by Targus

## Reliability and Dependability

Targus was the first to offer a global lifetime warranty, and is the leader in localized country support. Behind these strong market offerings lies industry-leading design and testing.

Using materials and processes of the highest standard, each case is created to ensure your client enjoys maximum reliability. Stress points, such as handles and strap anchors are reinforced with industrial steel rivets, and fittings are made strong enough to withstand the heaviest loads. Self-healing zippers with steel pull-tabs lock together with metal loops for extra protection.

## Rigorous Inspection Criteria

Incoming materials undergo rigorous inspection and sample testing before being accepted into the production process. Output Process Control incorporates inspection and preventative action for the highest levels of Quality Control and Assurance. Material testing includes tear strength, water resistance, thread count, zipper tape breaking strength and foam hardness.

Targus is committed to delivering customized solutions of quality that extend your brand equity across a multitude of portable technologies. For Targus, quality, reliability and dependability are not second-thoughts. They are a way of life.
